

# Auto CAD/CAM

## CAD Architectural Services.

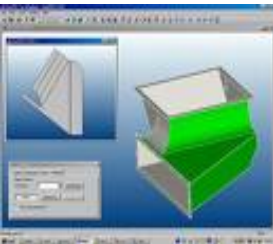

Architectural CAD drafting services like CAD conversion are the most commonly outsourced functions. However, there is a growing demand for more complex tasks like architectural rendering, architectural illustrations, walkthroughs, and computerized 3D modeling views and other architectural drawings and sketches

## Architectural 3D Rendering

Architectural 3D Rendering in particular, can be outsourced easily, with varying degrees of complexity. Our company has the expertise and the qualifications to develop complex architectural views, (manual rendering, 2D and 3D views) with the highest aesthetic sensibility and impeccable attention to detail

## What can we offer you?

We offer services in different kinds of architectural renderings or views

Basic architectural views - These views can provide a basic view of a plot or a building, complete with shadow and lighting effects if required.

Conceptual views - We can perform 3D renderings and conceptual views of your idea. The conceptual views we develop will have lighting and shadow effects as per your specifications. A 3D conceptual view will give form to your idea and will make it possible for you to visualize your concept from every angle.

Exterior views - We also have experience in developing architectural exterior views of prospective buildings. With this, you can get an idea of how your building will look from the outside. We pay the closest attention to details per your specifications.

Photo realistic views - We can develop photo realistic views and create an exact rendering of how your building will look. Photo realistic views require intricate detailing, right down to carpet designs and wall color.

We have executed both internal and external photo realistic views in the past, be it hotel lobbies complete with chandeliers or the exterior view of your building.

Composting - With photographs of your site, we can create composites of your future building in its exact location, right down to the street corner. With this, you can visualize exactly how your building will look in its future location.
